International application No.

PCT/AU 99/00178

A. CLASSIFICATION OF SUBJECT MATTER

Int Cl6:

B65D 77/06, 17/44, 30/24, 47/38, B29C 63/28, B67D 3/04, B67B 7/46, B65B 55/02, A61L 2/00

According to International Patent Classification (IPC) or to both national classification and IPC

B. FIELDS SEARCHED

Minimum documentation searched (classification system followed by classification symbols)
B65D 17/-, 25/-, 30/-, 33/-, 39/-, 47/-, 77/-, 88/-, 90/-, B67D, B29C 63/-, B67B, F16L 41/-, B65B 55/-, A61L 2/-

Documentation searched other than minimum documentation to the extent that such documents are included in the fields searched

Electronic data base consulted during the international search (name of data base and, where practicable, search terms used)
WPAT (liner#, diaphragm#, membrane#, bag#, pouch:, bladder#, nozzle#, spigot#, outlet#, port#, pipe#, tube#,
tubu:, cut:, sever:, pierc:, ruptur:, stopper#, valve#, gate#, tap#, seal:, cover:, foil, knife#, blade#, spik:)

PCT/AU 99/00178

Box 1	Observations where certain claims were found unsearchable (C ntinuation of item 1 of first sheet)
This interreasons:	rnational search report has not been established in respect of certain claims under Article 17(2)(a) for the following
1.	Claims Nos.:
	because they relate to subject matter not required to be searched by this Authority, namely:
2.	Claims Nos.
	because they relate to parts of the international application that do not comply with the prescribed requirements to such an extent that no meaningful international search can be carried out, specifically:
3.	Claims Nos.
	because they are dependent claims and are not drafted in accordance with the second and third sentences of Rule 6.4(a)
BxII	Observations where unity of invention is lacking (Continuation of item 2 of first sheet)
This Inte	rnational Searching Authority found multiple inventions in this international application, as follows:
compi to the	is 1-5, 20, 21 are directed to a tote bin liner having a wall including a transfer spigot. The transfer spigot rising a tubular body having an opening, an annular surface around the opening, a rupturable membrane sealed annular surface and the tubular body being shaped to mount a valve to the body such that a seal on the valve is the membrane against the annular surface.
See ex	ctra sheet for remaining inventions
1.	As all required additional search fees were timely paid by the applicant, this international search report covers all searchable claims
2.	As all searchable claims could be searched without effort justifying an additional fee, this Authority did not invite payment of any additional fee.
3.	As only some of the required additional search fees were timely paid by the applicant, this international search report covers only those claims for which fees were paid, specifically claims Nos.:
4.	No required additional search fees were timely paid by the applicant. Consequently, this international search report is restricted to the invention first mentioned in the claims; it is covered by claims Nos.:
Remark	on Protest
	No protest accompanied the payment of additional search fees.

International application No.

PCT/AU 99/00178

Box II

Claims 6-14 are directed to a cutter assembly having a valve with a valve body for engaging a spigot. The valve body includes a valve closure. The elongate cutter has an actuation means to provide axial movement of the cutter and the actuation means and/or the cutter body is adapted to move the cutter body to cut a membrane independently of the operation of the valve closure.

Claims 15-19 are directed to a method of sterilising a membrane. The method comprises attaching a valve with a flow passage and valve closure to the membrane, passing a sterilising medium into the space between the valve closure and the membrane and piercing the membrane with a cutter which passes along the flow passage when the valve closure member is in the open position.

Since the above groups of claims do not share technical features, a "technical relationship" between the inventions, as defined in PCT rule 13.2 does not exist. Accordingly the international application does not relate to one invention or to a single inventive concept.

Information on patent family members

International application No. PCT/AU 99/00178

This Annex lists the known "A" publication level patent family members relating to the patent documents cited in the above-mentioned international search report. The Australian Patent Office is in no way liable for these particulars which are merely given for the purpose of information.
